

Dear Mr.Wu,

Further to your request dated March 18, 2026, regarding Article 33 of the REACH Regulation (European Directive 1907/2006/EC), we would like to inform you as follows

The formulation review indicates that the product(s) in Table 1 contain(s) chemicals known to the Substances of Very High Concern (SVHC), included in Annex XIV (or in the "Candidate List" for inclusion in Annex XIV – status February 4, 2026).

for the relevant applications and above the applicable Thresh Hold Limit values.

Please note that it may be possible that such chemicals are present in trace amounts or as impurities below the reportable threshold concentrations. This entails that AkzoNobel may not be aware of these impurities due to the fact that its raw material suppliers did not have to report them to AkzoNobel. A commonly accepted reportable threshold in the industry is a concentration of <0.1%, unless lower specific concentration limits are set by relevant legislation.¹

If you have any further inquiries, please contact AkzoNobel representative.

This is an electronic document and is not signed.

¹ For the EU: Classification, Labeling and Packaging regulation 1272/2008

Table 1. Product(s) with Substance of Very High Concern (SVHC)

Article Number	Substance	CAS # ⁽¹⁾	%W t ⁽²⁾
Powder Coating (Interpon) EN261T	Trimellitic Anhydride	552-30-7	0.31

(1) “% Wt”: Weight percentage of the substance in the Material as supplied.
